

# 2003 Three-tier Patient Drug Formulary Guide

## Alphabetical Listing

Effective January 1, 2003 (Revised December 20, 2002)

### What is a Formulary Guide?

This is a Guide to your Formulary which is a list of medications preferred by your plan. The specially selected medications on this Guide are listed in alphabetical order and can help you and your prescriber maximize your plan benefits and minimize prescription medication costs. All of the medications listed have received FDA approval as safe and effective. A committee of physicians and pharmacists have chosen the medications included on this list.

### How do I use this Guide?

This Guide can help you locate brand and generic medication alternatives that may lower your copayment. Share this Guide with your physician and encourage him or her to authorize a generic alternative for you whenever possible.

### How does the Formulary impact my copayment?

The chart at top right describes the three-tier copayment options your plan provides. The first tier includes less-costly *generic* medications. These medications generally have the *lowest copayment*. The second tier includes *PREFERRED BRANDS* that are on the Formulary. These medications usually fall in the *middle copayment* tier. The third tier includes *non-preferred brands*. When a generic version of a brand-name medication becomes available, most brands move to the *highest copayment* tier. Likewise, if only one generic product is available for a medication, it may be placed on a higher tier. These medications are rarely listed on this Guide since they do not minimize costs as effectively as other medications that are listed.

***Copayments and coverage of medications and medication categories can vary by plan. This***

| THREE-TIER<br>COPAY LEVEL | TYPE OF MEDICATION   |
|---------------------------|--|
| Lowest<br>Copayment       | Most generic medications   |
| Middle<br>Copayment       | PREFERRED BRAND<br>medications on the formulary<br>with no generic available |
| Highest<br>Copayment      | Non-preferred brands or<br>brands with a generic available                   |

*Guide is meant to be a source of general information about the Formulary.*

### What if my medication is not listed on this Guide?

Due to space limitations, not all medications on the Formulary can be listed on this Guide. If you are unable to locate your medication on the Guide, please keep the following in mind:

- Most generic medications are preferred by your plan, usually at the lowest copayment.
- Your medication may have been added to the Guide after it was printed.

### Where can I get more information about this Guide?

***This Guide may change to reflect current medication availability and tier placement. You can find the most recent update at [www.mywhi.com](http://www.mywhi.com).***

Our online Formulary Guide is updated regularly every calendar quarter or more often if needed to reflect important changes. Besides this alphabetical listing, drugs also are listed in their medication categories. This guide is subject to change without notice. For assistance, please contact Member Services at 1-800-207-2568.

**Generic medications are listed in lower-case (small) letters and preferred brand medications are listed in UPPER-CASE (CAPITAL) letters.**

All oral antineoplastic, immunosuppressant and HIV medications are on the Formulary, if the medication is FDA approved.
